Suvir Potdar

South Brunswick, NJ | hello@suvir.net | suvir.net | github.com/Suvir0 | linkedin.com/in/suvir-p

SUMMARY

High school senior who writes software and runs the infrastructure it lands on. Three years maintaining a self-hosted server rebuilt across Proxmox, Unraid, and Ubuntu, alongside four shipped projects spanning a Python extraction pipeline, a desktop app with a C++ native bridge, and two study tools used by classmates. Seeking internships and part-time engineering work.

EDUCATION

South Brunswick High School

Sep 2023 – Jun 2027

South Brunswick, NJ · Grade 12 · Class of 2027 · Eleven AP courses by graduation

RELEVANT COURSEWORK

In progress AP Cybersecurity · College Computer Applications & Systems · AP Macroeconomics · AP Microeconomics · AP Comparative Government & Politics · AP English IV: Literature & Composition

Completed AP Computer Science A · AP Calculus BC · AP Statistics · AP Physics C: Mechanics · AP Physics C: Electricity & Magnetism · AP English Language & Composition

PROJECTS & TECHNICAL WORK

SAT Practice Platform

2026

practice.suvir.net · Web application, private

- Study application over the 3,714-question official SAT question bank, with a rebuild of the Bluebook testing interface so practice matches real test conditions.
- Wrote a Python extractor for source PDFs that set equations as vector art rather than text, cropping each one and reinserting it positioned to its question.
- Backend on two Cloudflare Workers with D1; frontend in vanilla JavaScript, no build step.

Stack: Python, JavaScript, Cloudflare Workers, D1

Roon Rich Presence

2026

rrp.suvir.net · Desktop application, open source

- Local-first desktop app publishing Roon playback to Discord, with no account, hosted service, or listening history leaving the machine.
- Isolated Discord's proprietary native SDK behind a C++ bridge with a stub backend for CI, keeping Roon discovery and playback mapping in a tested TypeScript core.
- Automated releases producing signed builds with checksums, SBOMs, and provenance.

Stack: TypeScript, React, Electron, C++, GitHub Actions

Ripuz

2026

Automation pipeline, open source

- Containerized workflow consolidating command-line tools with inconsistent output into one repeatable pipeline: intake, durable job queue, metadata processing, verification, cleanup.
- Made long jobs safe to resume through idempotency and deduplication, with preflight checks and disk guards running before a batch rather than after a failure.

Stack: Python, FastAPI, Docker, SQLite

Home Server & Self-Hosted Infrastructure

2023 – Present

Ubuntu · Docker · Cloudflare

- Rebuilt five times across Proxmox, Unraid, and Ubuntu, each trading ease of maintenance against control; currently Ubuntu running containerized services under Docker.
- Configured reverse proxies, TLS, DNS, and Cloudflare Tunnels for external access without exposing the host; Authentik for SSO on private services; Grafana for health and alerting.

GuessThatStat

2025

gts.suvir.net · Study tool, open source

- AP Statistics practice app built for a class of peers, and the first project of mine used by people without me in the room. Rebuilt the feedback loop after peer testing surfaced interaction problems invisible while building alone.

Stack: React, TypeScript

TECHNICAL SKILLS

Languages	Python, TypeScript, JavaScript, C++, Java, SQL, HTML/CSS, Bash
Infrastructure	Linux, Docker, Proxmox, Unraid, virtualization, reverse proxies, DNS, TLS, private networking
Cloud & CI	Cloudflare Workers, D1, Tunnels, GitHub Actions, GitHub Pages
Security & Identity	Authentik, OAuth 2.0, OpenID Connect, SSO, signed releases, SBOM and provenance
Operations	Grafana, dashboards, alerting, log analysis, backup and restore, PC building
